

Risk Management Research Report

A free quarterly survey of current research in risk management available at RMRR.com

Risk management is a growing area of scholarship with a high and steadily increasing volume of publications. The purpose of Risk Management Research Report (RMRR) is to survey and screen this flow of publications and to present extended scholarly summaries of today's most important scholarly work in a convenient format on a timely basis.

Each issue features approximately 15 of the most important scholarly articles in risk management published within the preceding quarter.

For each of these articles, RMRR presents an extended summary of about 500-800 words, which contrasts with the brief (approximately 150-word) abstracts that typically accompany publication. The purpose of each summary is to provide a substantive understanding of the content of the article.

RMRR provides several benefits to readers. The RMRR editor-

- Screens the voluminous flow of literature and identifies articles of special merit
- Provides a regular periodic flow of key information to risk managers and risk management scholars
- Makes longer summaries of the most valuable articles easily available to anyone involved in risk management.

RMRR focuses on formally published articles, not working papers. It is presented as an 8.5 x 11" color pdf file.

RMRR is published in Spring, Summer, Fall, and Winter, with approximate publication dates of April 20, July 20, October 20, and January 20. The first issue of RMRR is Spring 2009.

Robert W. Kolb edits the Report and writes each summary.
