

UNIVERSITY OF EDINBURGH  
Business School

Economics of Financial Technology Conference, 11 May  
to 13 May 2022

Call for Papers

## Welcome to the Economics of Financial Technology Conference

Against the backdrop of regulatory developments, innovations in technology have significantly reshaped the finance landscape across the world, upending long-established orders of asset transformation. The economic processes in the finance sector are inextricably linked to the wellbeing of everyone in a modern economy. Therefore, our ongoing understanding of the evolution of the sector is non-negotiable. Academics, finance experts, and policymakers have a responsibility to lead this drive.

The [Edinburgh Futures Institute](#) and the [University of Edinburgh Business School](#) are organising the conference on the Economics of Financial Technology in order to stimulate debate and research on financial innovation and the digital economy and how they impact welfare. The conference aims to bring together academics, policymakers, and finance professionals to share new insights and discuss the economic issues related to the application of technology to the practice of finance in a rapidly evolving regulatory landscape.

The three-day conference will include keynote lectures, a policy-oriented panel discussion on how academic research can help accelerate innovation in the finance sector for societal benefit, and presentations of research papers.

We look forward to seeing you in Edinburgh!

---
